

# Summary Notation: ArchiMate 3 Migration

Notation based on The Open Group ArchiMate 3.0 Specification

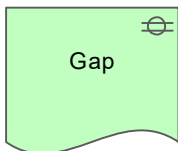

A **Plateau** represents a relatively stable state of the architecture.

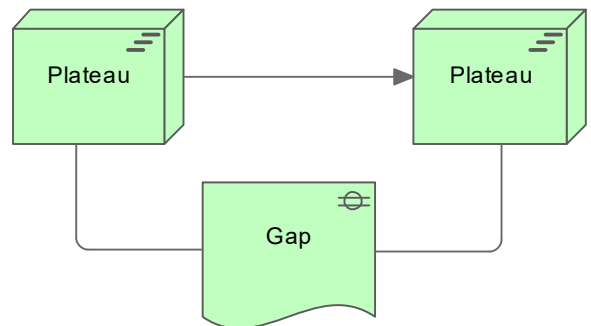

A baseline plateau **triggers** (migrates to) a target plateau.

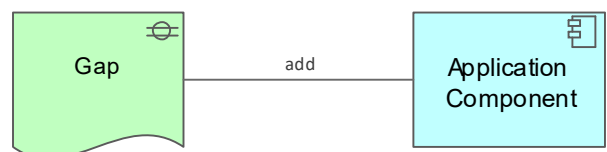

A plateau is an **aggregate** of core business, application and technology elements.

A **Gap** represents the outcome of gap analysis (differences) between two plateaux.

A gap is **associated** with two plateaux and defines the difference between them.

A gap is **associated** with core business, application and technology elements that are added, updated or removed to migrate from one plateau to the next.
